## Recommendation Letter for Clément Guy Clovis Delteil

To whom it may concern,

I am Associate Professor at the University of Primorska in Koper, Slovenia. My research is at the crossroads between machine learning and psychology, in particular personalized systems. After receiving my PhD in electrical engineering at the University of Ljubljana, Slovenia, I worked as a post-doctoral researcher at the Johannes Kepler University in Linz, Austria and then as Assistant Professor at the Free University of Bozen-Bolzano in Italy.

It is my pleasure to undertake the task of writing a recommendation letter for Clément Delteil to comment on his abilities related to future working experiences as a data scientist, data engineer, machine learning engineer, or similar.

I met Clement when he did an internship at our lab at the University of Primorska under my supervision. Two things stood out immediately. He was very eager to work and learn and he was quick in integrating into the social fabric of the group. I am confident in saying that he was the most hard-working, self-disciplined, effective, efficient and self-driven intern we had. He delivered all the tasks on time, often delivering more than he was asked. He showed a natural talent for organizing data. When he was missing skills, he asked for guidance and then improved quickly in a very independent manner. I remember very well his quick progress in machine learning skills bound to Python. He has worked on a plethora on diverse projects, supporting a PhD student in the analysis and visualisation of large data, developing a standalone application for the detection of plagiarism among students, just to name a few. I am still impressed at his incredible improvement during the short stay with us.

What I would like to comment on as well is Clement's personality. He is an open-minded person, very easy to talk to. He is happy to listen to new ideas and to comments about his work. In general, he is a very pleasant person to have around and I am sure he can be a great team mate.

For these reasons I strongly recommend to consider Clement for a position as a data scientist, data engineer, machine learning engineer, or similar. I wish him all the best for his career and I really hope to be able to collaborate with him in the future.

Sincerely,

Marko Tkalčič
